Page 3 4.6 of 5 stars simplicity 1 of 5 2 of 5 3 of 5 4 of 5 5 of 5 4/5 features 1 of 5 2 of 5 3 of 5 4 of 5 5 of 5 5/5 design 5 1 of 5 2 of 5 3 of 5 4 of 5 5 of 5 5/5 support 1 of 5 2 of 5 3 of 5 4 of 5 5 of 5 5/5 Application to rate this project It's a really great application, which has a lot of features and abilities. 5 stars from me vs After consulting with the company trying to use this I'm not terribly impressed. Not very powerful or simple Use. I'm the product manager for Alfresco Community Edition. SourceForge not no 1 the ability to respond to reviews, so I will do it this way. Alfresco Community Edition is an open source product that forms the basis for the proprietary Alfresco Enterprise Edition. The two products share more than 90% of the original code. Alfresco is not a perfect product, but it meets important needs for document management and collaboration for many people. I've reviewed the reviews and I don't recognize any reviewers. We never paid for the review, and I have no reason to believe any of the reviews are fake. However, some of the negative reviews make useful observations. I think the aforementioned problems share several root causes: * Many people use Alfresco for the wrong purpose. Alfresco is not a web content management system. It is an enterprise content management system / Document Repository. It used to have a WCM component, but that was removed because it was never as good as the right WCM solution. * Alfresco is a complex piece of business software. While we are trying to facilitate adoption and implementation, there is still a learning curve. Document management projects are inherently complex and often fail regardless of the quality of the software. (I give us 4 stars on Ease.) * Stability and polishing in Community Edition varies with where we are in the Enterprise Edition cycle. We weren't very good at communicating which releases were for feedback on new features, compared to the releases we expected to be widely adopted. We now differentiate between early access and generally available releases, so this situation has improved. * Alfresco does not support Community Edition, so when someone has a problem they often struggle to find solutions. It's hard to build a business model around open source products, but we're looking at ways to help people be successful while still paying our developers to improve the product. (I give our community 4-star support, but I think our support for the company is worth 5.) * Alfresco Community Edition is open source, but we need to improve in collaboration with our community associates and accepting these contributions to the product. We are introducing new features at a fast pace and we don't always take the time to review and polish contributions sufficient to become part of the core product. Improving this situation is a high priority. I'm very proud of our 5.0.d. edition, and I'm giving it five stars. But I admit I'm biased. It's a really great application, which has a lot of features and abilities. 5 stars from me Fantastic Work By Alfresco Management, they solve all the problems for Alfresco cloud & its hosting purposes Real useful things for me. Cool and easy to use. Thank you! Very easy to use and powerful program Good Soft! Thank you. Great application! I do. It's not a wordpress for blonde girls. It's mostly for nerds. Who knows more than 1-2 click keys. This is so easy. tank is 4 ur kind of I wouldn't pack with anything else. All open source applications. Excellent. It's awesome little Easy to use program It works just as planned and much more. Recommended! I load one of the first service services on each new computer. I've seen a lot of interest in Alfresco recently in the Documentum community. This may be a key milestone for alfresco adoption, even if it is in another market segment for now.
