This guideline covers the evaluation and management of heavy menstrual bleeding (menorrhagia). It aims to help healthcare professionals investigate the cause of the heavy periods that are affecting a woman's quality of life and to offer the right treatments, taking into account women's priorities and preferences. The Royal College of Obstetricians and Gynaecologists produced a guide to gynaecological services during the coVID-19 pandemic. MHRA Advice on Ulipristal Acetate (Esmya): In March 2020, the MHRA updated their advice on the use of ulipristal acetate (Esmya) to say that healthcare professionals should contact patients currently taking Esmya for uterine fibroids as soon as possible and advise them to stop their treatment. The license for Esmya has been suspended to protect public health, while a safety review is conducted a case of liver injury. The recommendations in this guideline for ulipristal acetate have been amended or withdrawn accordingly. Recommendations This guideline includes updated recommendations on: Includes recommendations on: history, physical examination and test information for women Who is it for? Health professionals Commissioners and providers of heavy menstrual bleeding services Women with Bleeding, their families and assistants development process guides How we develop NICE guidelines This guideline updates and replaces NICE CG44 guidelines (January 2007). The recommendations contained in this guideline represent nice's point of view, which came after careful analysis of the available evidence. In exercising their judgment, professionals and professionals are required to fully consider this guideline, along with the individual needs, preferences and values of their patients or people using their service. It is not mandatory to apply recommendations and guidelines do not replace the responsibility to make decisions appropriate to the circumstances of the individual, in consultation with them and their families and carers or guardians. All problems (adverse events) relating to a medicinal product or medical device used for treatment or in a procedure should be reported to the Medicines and Health Products Regulatory Agency using the yellow card regimen. Local commissioners and health care providers have a responsibility to enable the enforcement of guidelines when individual professionals and people using the services wish to use it. They should do so in the context of local and national priorities for the financing and development of services, and in the light of their duties to have due regard to the need to eliminate illegal discrimination, to promote equal opportunities and to reduce health inequalities. Nothing in this guideline should be interpreted in such a way that it is inconsistent with compliance with these duties. Commissioners and suppliers have a responsibility to promote an environmentally sustainable health and health system and should assess and reduce the environmental impact of implementing nice recommendations where possible.
